[4GB Mandriva Flash Released](#)

Mandriva on a 4GB USB

Mandriva Flash

Mandriva Flash 4GB
www.mandriva.com

In December 2006, Mandriva released a [2GB USB flash driver](#) with Mandriva Linux preinstalled, which was a huge success for them. Now they launched a bigger product, a 4GB USB flash driver that provides a live, full-featured, KDE-based Mandriva Linux 2007 operating system: *"On this upgraded Mandriva Flash version, the space allocated to the system files can be chosen at first boot. This makes it possible to install more updates and additional packages, in response to user feedback we got on the initial version"*, said Olivier Blin (Leading Live Systems Developer at Mandriva). **Features of the 4GB Mandriva Flash:**

- Mobile: take it everywhere and make any desktop your own!
- Handy: everything for your office work, Internet and multimedia... on a stick!
- Keep your personal data in your pocket!
- Fun: spectacular 3D-accelerated desktop, only with Linux!
- Safe: it doesn't make any changes on the host computer.
- Reliable: unmatched stability and hardware recognition.
- Fast: high data transfer rates with USB 2.0.
- Storage: up to 3GB available for user files.

Included software:

- KDE 3.5.4
- OpenOffice.org 2.0.4
- The Gimp 2.3.10
- Mozilla Firefox 1.5.0.10
- FlashPlayer 9.0.31.0
- RealPlayer 10.0.8.805

This 4GB version of the Mandriva flash has localization in English, French, German, Italian, Spanish, Polish, Portuguese, Russian and more. It doesn't require an installation, you can boot directly from the USB key and most hardware configurations are supported. **Content & services:**

- 4GB USB flash drive designed by Dane-Elec Memory (5 year warranty!)
- A neck strap
- Mandriva Linux 2007 KDE 32-bit
- Mandriva Club trial account: Silver level 1 month
- Supplementary CD image to boot even on legacy systems
- Mandriva web support: 1 month*
- Automatic hardware detection

Hardware Requirements for Mandriva Flash:

- CPU: all Pentium, Celeron, Athlon, Duron, Sempron processors.
- RAM: 256MB minimum, 512MB recommended.
- Graphic cards: NVIDIA, ATI, Intel i8xx and i9xx.
- Sound cards: all Sound Blaster compatible cards and AC97.

Mandriva Flash is shipped for free all over the world and shipments will start by the 12th of April. You can order Mandriva Flash 4GB product now from the [Mandriva Store](#).
