## [A New GSM/VoIP Mobile Phone from... \*\*Pirelli\*\*](#)

*To be unveiled May this year in Stockholm*

There were few mobile phones combining GSM and VoIP (voice over IP) technology up to now. But a new hybrid phone will be launched by a company well known as a tires producer - [Pirelli](#) Group. DP-L10 combines GSM tri-band capabilities with SIP-based [VoIP](#) via an integrated [WLAN](#) 802.11g interface, combining cell phone technology with the added advantage of transporting phone calls over the Internet. This model acts as dual phone: a tri-band mobile phone and a broadband cordless one. The Dual Phone enables mobile phone features such as Internet browsing, e-mail, SMS, and MMS, which can also be used through a fixed-broadband connection, providing the same mobile services with the added benefits of greater bandwidth and cost savings. DP-L10 will have a 65K colors screen, 0.3 megapixels build-in camera and will be announced on 16-18 May this year in Stockholm.
