[A New Laser and Feature-Rich Genius Mouse](#)

Mouse and presenter under the very same cover

The computer peripherals manufacturing company Genius just announced the launch of a new combo mouse that incorporates many advanced functions, including a presenter. Called the Traveler 915BT Laser, this latest product offering from Genius is Bluetooth compatible and is especially designed for travelers as it's smaller than a regular desktop mouse and, as an additional feature, it comes with no receiver unit as it can directly link with the Bluetooth port of the user's mobile computer system. The Traveler 915BT Laser Genius made mouse comes equipped with a 1600 dots per inch laser based sensor that is much more sensitive than a regular optical sensor and so it offers better tracking features even on difficult or uneven surfaces. The combo unit comes with two basic functions, that of a mouse and that of a presenter and users can easily switch between the two with just a press of a button. In order to make it easy for users to face a presentation, the Traveler 915BT Laser combo unit comes with advanced presenter functions like "Laser Pointer", "Page up/down", "ESC", and "F5" and so this Genius designed and manufactured mouse is a great tool for business travelers. On the outside, it comes with a stylish slim and flat design that make it a joy to work with and there's also a switch that allows users to select between the 800 and 1600 dots per inch resolutions making it easy to manage the overall sensitivity level. As the new Genius Traveler 915BT Laser mouse comes only with a Bluetooth compatible interface, users need a computer that integrates such an interface or they will have to purchase an adapter. The scrolling wheel or the mouse can also act as a multi functional button that can be programmed for different tasks. This new mouse is compatible with Microsoft Windows Vista and XP, as well as with Mac OS 10.2.8 and newer. On the energy side, the whole mouse is powered by two small AAA batteries and the advanced power management functions are extending the total life of the device.
