If you choose to use the loop as your take off, you need to boost all the way around it. Another good ramp to use is the one that is sort of under an elevated ramp; you will not need boost. To do many flips, choose your ramp and get speed. When you are about 20 feet away from the take off, hold Analog-stick Down. Keep it held and when you get to the peak of the take off, you will do many flips. Use the following trick to do three or more flips on the ground. First, do a wheelie then keep it held. Hold Preload (R), and when it is full, release it. While holding Analog-stick Back, you will do three or more flips. **Quick turn**- When going fast and are trying to turn, use the speed boost while turning. The bike will seem to jump forward.- When you need to make a sharp turn, do a stoppie (not a full one) and turn in the direction that you wish to travel. **Backflip without going off jump** Do a wheelie. Preload while doing the wheelie and release Powerup. You will do a backflip without going off a jump. **Glitch: Full boost** Go to freestyle or two-player mode and find the cage hanging in the air. Get inside it. Use Preload and repeat this several times in the same location until your boost is full.
