### *Character passwords*

Dragon Ball Z: Budokai Tenkaichi is a videogame developed by Spike Co. Ltd. and published by Bandai Co. Ltd. It was only designed for the PlayStation 2 console from Sony and released in October 2005. The title is classed as a fighting game, with a lot of anime influences. It is based on the popular Dragon Ball Z franchise and is played from a third person perspective.

Dragon Ball Z: Budokai Tenkaichi is the first in a lineup of fighting games that use the characters which have appeared in the anime and manga series. Players can choose from 56 unique characters that can take no less than 90 forms and they can fight all the battles from the Saiyan Saga up to the beginning of the Baby Saga. Unfortunately, there are no in-game transitions in it, which put off some of the fans of the series. Still, all the other major defining elements of the Dragon Ball franchise are there for players to enjoy, including a wide selection of episodic characters, both good and evil.

The release has a variety of game modes. There's a Story mode that allows the players to go through battle after battle, all the time collecting more Dragon Balls and getting more powerful. There is a World Tournament that allows players to fight a series of ever more powerful enemies and there's a multiplayer mode, which lets players take on a buddy in head to head fights.
