[E-TEN Launches The 3.5G Glofiish X800](#)

Running Windows Mobile 6

E-TEN's ultra thin all-in-one Pocket PC Phone with 3.5G capabilities, the [Glofiish](#) X800 (that was until now known as the X600) has made its debut at CeBIT. The handheld's large display with a VGA resolution and the Windows Mobile 6 platform ensure that the user conveniently works with documents, messages or multimedia while on the move and outside of the office. Its screen offers up to four times the resolution of previous [E-TEN](#) handsets and allows the on-screen display of more documents, calendars or spreadsheets at once. It also makes multimedia more enjoyable, as the user gets to view his/her photos and video in finer detail. Running Windows Mobile 6, that was optimized for maximizing the productivity of the user while on the move, the handset also includes simplified web search, email, instant messaging and blogging. The Mobile Office suite in Windows Mobile 6 has also been updated so that it offers even more options to view and edit documents. Through HSDPA, it offers speeds that are comparable to fixed-line connections, improves mobile communication and makes surfing the Internet more enjoyable. Users can also access advanced mobile services including VoIP, video streaming and video calling. What the X800 does inherit from the previous models is its small size. The handheld measures 113.5x60.5x15.8 mm. Other features include support for GSM, WiFi, GPS and Bluetooth, a 2 megapixel camera with autofocus on the back as well as a VGA camera in front for video calling. The Glofiish X800 is currently being displayed at CeBIT, where visitors can go and check it out for themselves at [E-TEN's](#) booth.
