ECS Launches GeForce 9600 GSO High Performance Graphics Card

The latest NVIDIA GeForce 9600 GSO technology in a card fit both for gaming and home entertainment usage

Elitegroup Computer Systems (ECS) has announced the launch of its latest graphics card based on the brand new NVIDIA GeForce 9600GSO GPU. The new ECS N9600GSO-384MX-F graphics card features 384 MB GDDR3 memory and a 192-bit memory interface. It has a 550 MHz core and 1600 MHz memory clock speed. The 96 processor cores give this 9600GSO GPU-based graphics card enough power to fulfill any gaming need by providing unprecedented graphic performance. Designed for the mainstream segment, N9600GSO-384MX-F GPU intends to be the excellent choice that comes both with the high performance needed and with the reasonable price tag wanted by any user. The latest generation games are now at hand. ECS N9600GSO-384MX-F features support for DirectX10 and is able to render resolutions as high as 2560 x 1600. The graphics card offers full support for NVIDIA SLI technology allowing gamers to dramatically boost the graphics performance in order to achieve the high level gaming experience they wish for. The ECS graphics card is compatible with the latest PCI Express 2.0 interface, a feature able to assure gamers they will keep up with the future games and 3D applications. N9600GSO-384MX-F is able to get to the heart of any home entertainment enthusiast as well. The second generation PureVideo HD Technology featured by the card provides high-definition video decoding acceleration and post-processing, offering the image clarity, smooth video, accurate color, and precise image scaling for movies and video any users dreams about. The hardware-level decoding capabilities unload the CPU and lower its utilization even down to less than 10%. Through this incredible feature, games and HD video playback can be enjoyed without critical requirement of the CPU. Being able to process an amazing graphics power for both gaming and digital home entertainment, N9600GSO-384MX-F presents itself as the most attractive solution on the market intended for mainstream gamers. Elitegroup Computer Systems, one of the first motherboard manufacturers, designs and manufactures notebooks, servers, motherboards, video cards, wireless solutions and handheld devices for distributors worldwide and it continuously struggles to offer high quality products for its customers.
