[F.E.A.R Extraction Point - Cheats and Fixes](#)

Don't mess with Japanese inspired ghosts

F.E.A.R Extraction Point is an add-on that tries to answer the riddle of a mysterious little girl in the first title. Even if the original game ended in a huge explosion, it wasn't enough to stop the fury unleashed by the restless spirit of a tormented soul and if you think that the first experience made you tougher somehow, then please turn off the lights. **Cheat mode: Press [Talk] (default is T) during game play. The game will freeze, but not crash. Enter one of the following codes, then press [Enter] to activate the corresponding cheat function.** Invulnerability - god Full ammunition - ammo All weapons - guns Full armor - armor Full health - health Position mode - pos All weapons and unlimited ammo - tears Ghost mode - poltergeist Increase health and reflexes - gear Level skip - maphole Weapons, full ammo, armor, health - kfa Spawn indicated weapon - gimmegun Spawn indicated ammunition - gimmeammo Display build version - build **Weapon names: Use one of the following entries with the gimmegun code to spawn the corresponding weapon.** Assault rifle: assault rifle Cannon: cannon Dual pistols: dual pistols Frag grenade: frag grenade Laser carbine: lasercarbine Minigun: minigun Missile launcher: missile launcher Nailgun: nail gun Pipe bomb: remote charge Pistol: pistol Plasma railgun: plasma weapon Semi-auto rifle: semi-auto rifle Shotgun: shotgun SMG: submachinegun Trip mine: proximity

Solution for game freezing and crashes:- Turning off the shadows can improve the performance dramatically and get rid of freeze problems on some systems.- Apparently, Soundblaster cards are notorious for doing poorly on the bottom half of the motherboard (hence the SLI). So moving my sound hardware acceleration (in the dxdiag screen) could be the answer on some systems.- The game is optimized for Nvidia and will cause some problems on systems running on ATI hardware. Apparently, the drivers are identifying the executable named FEARXP.EXE and try to run some kind of optimization on it. The solution is to rename the main executable to FEAR_ME_XP.EXE. Not only that the game should work but there will be an important increase in framerate.
