## **Gigabyte to Showcase Its Latest Inventions at COMPUTEX 2008**

*New ideas are put on display to be admired and recognized by customers*

Gigabyte Technologies, a worldwide leader in motherboard manufacturing, will be present at COMPUTEX, Asia's largest IT tradeshow, with its latest innovations in six areas. The vendor will showcase its products between June 3rd to 7th at its booth located in TWTC Nangang (4th Floor, M108). Gigabyte will present its latest series of high performance motherboards that have been designed with the company's own Ultra Secure and Ultra Power Efficient Technologies. Among the new motherboards that will be shown at COMPUTEX, GA-EP45-EXTREME and GA-EG45M-DS2H are included. Both of them are based on Intel's latest 4 Series chipsets. GA-MA790GP-DS4H, featuring support for the AMD 790GX chipset, will also be a part of the show. For the graphics cards, Gigabyte brings to the table its latest cooling technology, the Multi-Core. It utilizes three cool points for the connection between the heat pipes and the fins, which provides an extra thermal conductivity, especially during heavy loading. Another new development is the Gamer HUD (Heads Up Display) utility, which enables hardcore gaming enthusiasts to tweak the highest levels of performance. Also, Gigabyte brings to the tradeshow a range of Ultra Durable 2 Edition graphics cards that feature Ferrite Core Chokes, Low RDS (on) MOSFETs and Lower ESR Solid Capacitors. On the Networking Server & Communication area, Gigabyte brings three emphasized platforms GS-R1271-RH, GS-R227E-RH and GS-R1231-RH for 2008. The platforms, all in GIGABYTE booths, come with high-capacity that brings data availability improvement while being able to protect against data loss through its HW RAID functions. EAGLES II and MEC II are also on Gigabyte's launch list. The first one is a luxurious high-end desktop solution, while the second is an ultra thin multimedia entertainment PC that features a minimalist design to fit into any backgrounds. The multimedia IPTV box and Glee Cube that allows users to watch TV anytime and anywhere come along, too. GIGABYTE also brings on display the full series of its high-grade chassis, all from Cupio, iSolo, Callio to Setto. Besides that, GIGABYTE ODIN GT, the world's first software-managed power supply, is able to increase power efficiency and boost the performance of your PC. GIGABYTE showcases M528, the 4.8" MID (Mobile Internet Device), with only 340g in weight as well as sleek design for the notebook solutions. Except for minimalist design, GIGABYTE 8.9" Netbook M912 offers all the innovative technologies available. GIGABYTE M700 is the 7" UMPC (Ultra Mobile PC) that features superb portability and full functions. The company will also put on show a full series of 14.1" W476V and 15.4" W576V notebook PCs, all designed as luxurious product images for business elites.
