## Habbo Hotel Tips and Tricks

### *A free party hall is always nice*

Habbo Hotel is a virtual community that surfaced in the year 2000. Habbo Hotel conveniently combines the two concepts of a chat room and an online game, and its success brings an ever increasing number of players even today. The game is centered on Habbos, the virtual representations of its real life members. Your Habbos avatar can be dressed according to your tastes, using pre-supplied virtual clothing. The service's other focus point is virtual furni, which can be bought by Habbos using credits. Credits are acquired via a variety of methods, all involving real life money traded for virtual currency, including SMS, home phone, and money order. Furniture can also be traded between users so it's always of some value. Since credits are most often than not available through in-game codes you receive upon a successful phone transaction, there are a lot of localized codes which worked as an income input. Be advised these are linked to one Hobbos alone and they will not work again on different characters, or in different time frames, making the obsolete as a cheating tool.

**Free Party hall** You need to go into the "search a room" panel and search for the "Get'm boys !!!" room. Enter it and add Fattybumbum to your friends list. The bot should be online each day at about 2:00 - 3:00 pm. When he is, send him a message saying "Rainbow", to which he should reply "yes my dear yes". You should now create your own empty room and stay there for a while, then reply "come to ". He would answer "coming my dear". He will enter your room and say "a bit empty" and then disappear back to his lace, at which point you should leave the room too. Give him a pet dog (any type would do) and he will thank you. Enjoy your new room now, a party hall with DJ Decks and flashing floor tiles, a disco ball and a man dressed up as Elvis. After 1 minute of staying in your room, go back to his place and the dog will vanish, only to find it back at your place. Just sell the dog by right clicking it and select "goodbye" and you're in the clear, with no credits spent this way, whatsoever.

**Flooding a room** To give continuity to your online discussions or simply flood a room, all you have to do is highlight what you want to say and press [CTRL]+[C] to copy it and [CTRL]+[V] back again for paste.

**Quick move furni** Hold [Alt] and click on a piece of furni to move it quickly.

**View furni list** Type [:furni] to see a list of furni in the room. Hold [Shift] and click on a room to see who is in there. This can only be done in public rooms.

**View room connection** Type [:performance] to see how heavy is current room connection is. A value of 1000 is just right.

**View occupants of room** Type [:chooser] to see who is in the current room. You must be in Habbo Club to use this.

**Fast Speech** You don't have to switch from Say to Shout. A quicker way is holding [Shift] and pressing Enter after you have typed your message.

**Move the loading bar** When Habbo Hotel is loading (you can see 'Sulake' above the loading bar), you can drag it by clicking the bar and hold the left click down, move the mouse around and the bar will move with it.
