[Introducing PCLinuxOS 2008 "MiniMe"](#)

A minimalist Live CD with KDE

Texstar proudly presents the 2008 edition of PCLinuxOS MiniMe, a minimalistic Live CD with KDE, that you can play with and customize it the way you want. PCLinuxOS 2008 MiniMe comes with Linux kernel 2.6.22.15, ALSA 1.0.15 and a very basic KDE 3.5.8 desktop environment. Not only that PCLinuxOS MiniMe is a Live CD, but it can be installed on your hard drive. You can add in your own background, window decoration, preferred applications, localizations and supporting libraries to fully trick out your desktop. Moreover, you have the possibility to remaster your own custom version of PCLinuxOS MiniMe.

Highlights of this release include:

- Linux kernel 2.6.22.15
- ALSA 1.0.15
- ALSA sound configuration
- KDE 3.5.8
- ATI/NVIDIA installation tool
- Make Live CD GUI
- Make Live USB key
- Internet and Clock setup were moved to a Utilities folder on the users desktop
- Redo-MBR with OS-probing utility for adding other GRUB boot entries into the GRUB menu
- Root password and user setup were moved to first boot after installation to hard drive
- NdisWrapper support files supporting various wireless network cards
- Linsta Squared window decoration

About PCLinuxOS PCLinuxOS is an English only Live CD initially based on Mandrake Linux that runs entirely from a bootable CD. Data on the CD is decompressed on the fly, allowing up to 2GB of programs on one CD, including a complete X server, KDE desktop, OpenOffice.org and many more applications all ready to use. In addition to the Live CD, you can also install PCLinuxOS to your hard drive with an easy-to-use Live CD Installer. Additional applications can be added or removed from your hard drive using a friendly apt-get front end via Synaptic Package Manager.
