[KDDI W52T - A Slider With an Amazing Screen](#)

The most advanced phone from the Spring Collection

Another one of the phones from KDDI's Spring Collection was the W52T, designed by Toshiba and if you stop to consider what features it brings, you'll realize what an amazing phone this is. Also, the slider phone looks as good as any other KDDI mobile phone you've seen so far. The cell phone features a pretty amazing 3 inch display with a 480 x 800 pixels resolution (WVGA), a 3.2 megapixel camera with autofocus, FM Radio, as well as Bluetooth for connectivity. The 1GB internal memory it comes with will be enough storage space for most people, while the ones who want more will be pleased to know that the phone also includes a MicroSD card slot for memory expansion. So, just like in the case of the [W51SA](#), with a 2GB MicroSD memory card, you'll get a total of 3GB to store your files on. The W52T is also optimized for video services. Thinking only about that huge screen, it definitely couldn't have been possible to keep this handset small and slim. But even though it measures 111 x 51 x 22 mm and weighs 152 grams, it's not going to be less appealing for the people who'd rather have a smart phone than a light phone. Like its brothers from the [Spring Collection](#), the W52T also comes in three colors, Black, Copper or Purple and it will last for up to 220 minutes of talk time or 290 hours on standby mode. Toshiba's W52T is probably the most advanced phone of the ten recently presented by KDDI, doing just about everything that the W51SA by Sanyo can do, and more.
