[Kaspersky Lab Announces the Launch of Beta Testing for Version 6.0 Corporate Products](#)

Beta testing for three of its new corporate solutions ...

Kaspersky Lab announces the launch of beta testing for three of its new corporate solutions: Kaspersky Anti-Virus 6.0 for Windows Workstations, [Kaspersky](#) Anti-Virus 6.0 for Windows File Servers and the convenient management tool for antivirus software, Kaspersky Administration Kit 6.0. [Kaspersky](#) Anti-Virus 6.0 provides a full range of capabilities for reliable protection of workstations and file servers. The product protects computers from all types of contemporary malicious programs, including rootkits, spyware and adware. This antivirus solution also allows for flexible configuration of file scanning and proactive modules. The version 6.0-product line sees the implementation of new acceleration technologies for antivirus scanning, as well as load balancing during antivirus scanning. [Kaspersky](#) Anti-Virus 6.0 for Windows Workstations also provides protection from hacker attacks and uses heuristic analysis to block advertising banners. A notable addition to the product is Network iSwift, a technology that eliminates the need for rescans throughout the entire network. Meanwhile, Kaspersky Administration Kit makes for convenient and easy management of antivirus protection on the corporate network. Beta testing offers users the opportunity to be among the first to experience the very newest technological developments from Kaspersky Lab, share their opinions about products and suggest ways of improving test versions. Furthermore, active participants in beta testing receive free versions of the products. To receive free beta versions of the above products and find out more information about beta testing, please visit:
