## [Katie Holmes-More Than 3 Months Pregnant?](#)

*"If she does still have six months of her term left to go, she is going to be as big as a house by the time the baby arrives."*

According to late news, actress Katie Holmes is more than 3 months pregnant, as it was first rumored in the media. Katie, 27 and her lover Tom Cruise, 41, were photographed during the weekend walking in a Los Angeles park and it appears the actress has a really big tummy, which indicates she is more than 12 weeks pregnant. The Scientologist couple announced last week that they are expecting their first child, just three months after they got engaged. An onlooker told Britain's Daily Mail newspaper: "She had a very considerable bump, and you could see her belly button through her floaty top. To me she looked more like a girl who was five months pregnant than three. If she does still have six months of her term left to go, she is going to be as big as a house by the time the baby arrives."

Meanwhile, last week, John Travolta and Kelly Preston urged pregnant Katie to have a "silent birth". According to the questionable ideologies of L. Ron Hubbard, the Founder of the Scientology organization, "a silent birth" implicates the absence of any kind of noise, whether it's music, chatting or expressions of pain from the mother. "Maintain silence in the presence of birth to save both the sanity of the mother and the child and safeguard the home to which they will go. And the maintaining of silence does not mean a volley of 'Sh's', for those make stammerers. Next, the delivery itself should carry as little anaesthetic as possible, be as calm and no-talk as possible and the baby should not be bathed or chilled, but should be wrapped somewhat tightly in a warm blanket, very soft, and then left alone for a day or so."
