## [LG Fusic Available on Bell](#)

*The mobile phone designed for the mobile music lifestyle*

After being released on [Sprint](#) in the USA it is now time for Canadian users to enjoy the LG LX550 going by the name of LG Fusic. [LG Fusic](#) was the first mobile phone launched on the U.S. market that included an FM transmitter for playing music through a radio or car stereo, and was designed to be appealing to people who want a mobile phone with an integrated MP3 player, that offers high-quality sound, and the possibility to easily transfer and store music on their cell phones. The handheld is equipped with 23MB of internal memory and a MicroSD card slot for memory expansion, and comes with a 64MB MicroSD memory card, which can be replaced with a bigger one in case 64Mb doesn't seem enough for storing your favorite tracks. The fancy clamshell phone measures 96 x 48 x 20 mm and weighs 120 grams which means that it can be carried around in a pocket without being inconvenient, and features an iPod-like external navigation wheel and changeable covers. Bluetooth with A2DP support and a 2.5 mm headset jack allow the use of almost any type of headset, wired or wireless. Leaving its music phone features aside, LG Fusic also packs a 1.3 megapixel camera with video capture and flash, dual color displays and EV-DO access for downloads or video streaming. LG's small flip phone is now available on Bell and can be purchased contract-free for \$375.95 or \$179.95 on a three year contract.
