- 3MP auto-focus camera
- TV-out function
- MP3 and FM radio
- 80MB user memory
- Bluetooth
- MicroSD up to 4GB

LG KP320 Unveiled - Fashionable Multimedia Phone

No details about its release date

LG KP320, a new fashion-orientated phone from LG's [2008 line-up](#), was just unveiled today. Although not officially presented, we have enough details about the handset to say that it will most likely be a very successful model if released in all the important mobile markets. The new KP320 comes as a mid-range phone and has several features that can easily attract users who can't afford too expensive handsets but still want a good device. Measuring 107 x 46 x 13.5 millimeters and weighing only 81 grams, LG KP320 is a candybar phone that comes with a very nice overall look. Apparently, its case benefits from the same color gradation feature used on the recently launched [KF510](#) slider, which gives it an exquisite appearance. In terms of network connectivity, the new LG only offers support for tri-band GSM networks (900 / 1800 / 1900 MHz), hence no 3G speeds for Web browsing. Anyway, other specs are pretty good, and among them we have to first mention the 3.2 Megapixel camera with auto focus, flash, digital zoom and video recording, a camera that should be able to offer photos at a pretty good quality. Furthermore, LG KP320 comes with a 2 inch TFT display with 262k colors support and a 240 x 320 pixels resolution, TV out, Music and video player (MP3, AAC, AMR, WAV and MPEG-4 supported), FM radio, Bluetooth, USB, Internet and email capabilities, document viewer, speakerphone, 80 MB of internal memory and microSD card support for an extra of up to 4 GB. The handset's battery is a 900 mAh Li-Ion one, but its performances are unknown at this moment. No details about the phone's pricing yet, nor about a release date. Hopefully, the handset won't be overpriced and will hit the market before the [summer](#).
