## **MSI Unleashes Its Syren Series Lineup**

### *Designed for audiophiles*

Taiwanese motherboard and graphics card maker MSI has announced today the introduction of a new set of computer audio products, dubbed Syren series. As part of the announcement, the company has introduced three new products to the fresh line, including a high-quality audio card, a pair of digital gaming headphones and a pair of portable USB stereo speakers, designed to enrich the audio experience of computer users. With the release, MSI touts a range of high-quality products designed to deliver a boost in performance and audio quality.

The company's new SyrenSound X-Fi audio card is designed to be compatible with PCI-Express x1 slots and deliver a signal-to-noise (SNR) of 104 db. The card can enable gaming and multimedia enthusiasts to support 5.1 and 7.1 surround sound systems, thanks to the integration of the X-Fi technology. In addition, the same technology will enable your computer system to perform better, thanks to a reduced stress on the computer CPU.

MSI's new digital headphones, dubbed SyrenPhone Gaming, are part of the company's growing line of gaming-focused products, designed to provide enthusiasts with the necessary hardware to improve their gaming skills. SyrenPhone Gaming headphones have been featured with a 2.5mm cable and a gold-plated USB connector, accessible controls and an overall comfortable design, according to MSI.

For those laptop users who are looking to boost the audio performance of their machine, MSI has unleashed two portable 2.0-channel speaker systems, featuring a power of 2 watts RMS and an accessible USB interface. The SyrenSpeaker min package also includes a travel pouch, enabling users to better carry the two speakers alongside their portable PC.

MSI hasn't provided any details regarding the pricing and availability of its latest series of audio products, but we will try to keep you up to date, as soon as details are available.
