## [Mech Commander Cheats \(PC\)](#)

### *Restore ammo, armor and other codes*

MechCommander was the second [real-time tactics](#) (RTT) video game based on FASA's BattleTech/MechWarrior franchise (though often being called a [real-time strategy](#) game), developed by FASA Interactive and distributed by MicroProse. Although it is claimed that MechCommander is the "first Mechwarrior game of tactical command", this is not true. Another game — BattleTech: The Crescent Hawk's Revenge — was released eight years earlier, and was also a game of tactical command staged in the same Battletech universe. MechCommander was released in 1998. It had an expansion which was later combined with the original title and released as MechCommander Gold. A sequel also exists (distributed by Microsoft) – MechCommander 2. MicroProse also used many of the ideas in their 2000 Starship Troopers game. [\(Wikipedia\)](#)

**CHEATS** Use Windows Explorer to enter the game directory and create a copy of the "windows.fit" file and name it as "ixtlriimceourl". Please note: The file must be renamed "buymechcommander.2" in earlier versions of the game. Copy and rename "windows.fit" so both filenames are present if the game's patch status is unknown. Then, enter one of the following codes at the indicated screen to activate the corresponding cheat function. A sound will confirm correct code entry. Please note: Repeated use of some of the codes may crash the game.
