## [Motorola Announces Windows Mobile 6.1 Support for Its Rugged Mobile Computers](#)

*Starting with the end of the year*

The Enterprise Mobility business from [Motorola](#) recently announced the availability of the Windows Mobile 6.1 operating system on its rugged mobile computers and enterprise digital assistants to better manage and deploy devices throughout the enterprise. Initial products to support the new platform will include Motorola's flagship MC9000 rugged mobile computers, the ergonomic MC3000 mobile computers, the size-optimized MC70 and [MC75](#) Enterprise Digital Assistants.

Windows Mobile 6.1 helps provide advantages to Motorola mobile computer customers deploying business-essential applications. Support for Microsoft System Center Mobile Device Manager 2008, providing a single point of access for line-of-business applications and corporate data, also brings security-enhanced features such as on-device encryption to help protect sensitive information.

IT managers will also find increased device control to wirelessly administer and deploy software upgrades, available through System Center Mobile Device Manager or Motorola's device management solutions.

Therefore, the MC3000 mobile computer will now support Windows Mobile 6.1 for the first time. With the option of Windows Mobile 6.1 or Windows CE 5.0, [Motorola's](#) MC3000 mobile computers provide application developers and customers with the flexibility to choose the operating system that best serves their mobile workforce needs.

The MC3000 mobile computer is ergonomically designed for scan-intensive environments that require high-quality data capture. Select MC3090 [Windows Mobile 6.1](#) configurations also feature the popular rotating scan head with left, right and front positions to allow the user to adjust the scanning position for increased comfort and productivity.

Along with four-foot drop specifications across the entire operating temperature range, the MC3090 series of rugged mobile computers has an IP54-rated sealing for protection against water and dust and provides reliable performance in tough environmental conditions.

Support for [Windows Mobile 6.1](#) is expected to be available on the MC3000, MC9000 and MC70 mobile computers in the fourth quarter of 2008, as well as on the MC75 in the first quarter of 2009.
