[NEC presents the N903i](#)

Cutting-edge features in a clamshell design

The high-end Nec N903i, thought to be [NEC](#) 's secret weapon, is a clamshell phone available in bright colors such as blue and orange that has a set of really nice features which will probably make some people be very interested in this device. As most of its [NEC](#) brothers, N903i is a smooth clamshell phone with a very interesting design that comes equipped with an amazing 2.5 inch 262k color TFT LCD with a 480 x 690 pixel resolution, perfect for viewing images and documents or using the GPS navigation, as the N903i comes with built-in GPS. It also features a 3.2 megapixel camera with a flash, auto-focus and software called PictMagic, with the help of which you can scale images, or make various adjustments (brightness/contrast, saturation, backlight). The MicroSD memory slot allows you to use MicroSD cards of up to 2GB, therefore it is very easy to store as much music or images as you want on this handheld, provided that you get a memory card to expand the internal memory. Making everything you might be interested in available, the N903i also features Bluetooth for connectivity and will be very appealing to even the most pretentious of us. Nec N903i measures 105 x 49 x 24 mm, and weighs no less than 112 grams. It will last for up to 500 hours in standby mode and around 3 hours in talk time. Although there is no information concerning the price of this mobile phone at the moment, the NEC N903i is said to be available very soon.
