[New Accesories For iPod From Kensington](#)

Five New Products

Kensington has expanded its line of iPod accessories. Three of the products being announced, the SX 2000 Speakers for iPod, the Micro FM Transmitter for iPod and the Digital FM Radio and FM Transmitter for iPod will support the recently announced iPod nano from Apple Computer. The SX 2000 Speakers for iPod combines best-in-class speaker technology from NXT with a stunning industrial design that complements the iPod and the new iPod nano. Thanks to breakthrough flat-panel SurfaceSound(R) speaker technology from NXT, the speakers deliver superior bass, more balanced sound, and a wider "sweet spot" versus traditional cone speakers. The Kensington Micro FM transmitter plays through any FM receiver. Built with patented Aerielle technology, you get superior audio and noise filtration so your music sounds great. Digital FM Radio and FM Transmitter for iPod lets you listen to your favorite FM radio station with your iPod or transmit iPod tunes through your home or car stereo. The FM Transmitter will also seek out the clearest radio station in your area with the simple press of a button. The backlit digital display is simple to read and tune to any station, and you can lock in your favorites with four pre-sets. Travel Plug Adapter with USB Charger allows you to plug into outlets in up to 150 different countries. And two modules allow you to either charge your iPod or other USB powered devices, or plug in any consumer-electronic AC powered product. Simply press a button to slide out the appropriate plug. Then plug the electronic device into either the USB charger or AC module. Transporters for iPod Shuffle come with two attachments for easy carrying. Choose the sleek belt-clip for out-of-the-way convenience, or use the carabineer's handy spring-loaded clip to attach your shuffle to just about anything.
