The E.V.A., a no-nonsense expensive audio system NBS

## [New Speakers from NBS Are Screaming Luxury and Style](#)

### *A less conventional approach to speaker design*

NBS is a name that has become renowned for the quality of their connectivity solutions when it came to high-end cables needed in top-drawer, luxury applications. Now it's time to introduce to you the latest loudspeakers coming from their labs, a very strong statement in the world of very expensive audio equipment destined for the generous audiophiles. There are three new units in the NBS family: the Pyramid, the E.V.A. and the Butterfly, each with untamed luxury written all over and looking simply stunning. &nbsp; Despite their very common names, which might lead one into confusion, these new speakers are nothing of a toy. If you've been expecting lot of plastic and cheap design, you won't find them in the NBS speakers. &nbsp; These pieces of audio equipment are made from high-class wood essences and come with an impeccable finish; not only have they been carefully engineered to deliver you the best sonic performance for your penny, but they'll also be a most valuable addition to your luxurious interior. Easy to integrate in most settings, the new NBS Speakers boast bold and assertive shapes that will make a lot of heads turn, even before they'll sing their first tunes. &nbsp; While the Pyramid says pretty much everything about the shape of the speaker, the Butterfly won't. You'll be surprised to see a huge elegant wooden cabinet with slanted facets looking like a butterfly with wide open wings; but the whole delicate idea vanishes when you learn about the massive 18" woofer housed inside the cabinet. When paired with the E.V.A., you'll be able to enjoy a massive sound coming from dual 18" woofers, two midrange compression drivers and dual ring radiator tweeters for extreme left and right, allowing you to get a huge sound stage in the largest of rooms. The phase alignment of all the drivers ensures a very well-balanced listening and a sonic response with authentic, lifelike dynamics. &nbsp; Now, while the cheapest model from the Pyramid range will set you back \$25,000 (in case we agree to call \$25K "cheap"), the highest version costs thrice as much. And when it comes to the E.V.A. and the Butterfly, things get even bigger: a no-joke \$200,000 price tag comes with these units, making them as exclusive as they are beautiful. &nbsp; &nbsp; We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
