[Nokia Announced Three New Handsets](#)

The low-end phones will be available in the second quarter of this year

Nokia, one of the world leaders in communication, has introduced three new mobiles from its low-end class of handsets. The new phones Nokia 2610, Nokia 1112 and **Nokia** 2310 have been launched at the Nokia Experience Mobility 2006 event in Chongqing, China. The first from the series, **Nokia** 2610 has a candybar design and has been rubberized for an intensive grip. It seems that the handset will be available in two versions - GSM (850/1900) for the Americas and GSM (900/1800) for Europe and Asia. Its main features are 65k color display, WAP browser, E-mail support, Nokia Xpress Audio Messaging, **SMS**/MMS/IM support, Voice recorder, Built-in speakerphone. Nokia 1112 has a block, compact design and will also be available in two versions - GSM (850/1900) version for the Americas and GSM (900/1800) version for Europe and Asia. The phone features a 96 x 68 pixel monochrome display, 20-chord polyphonic and **MP3**-grade ringtones, SMS and picture messaging support, speaking alarm and clock, built-in speakerphone. **Nokia** 2310, also a compact-designed mobile, will be available only in GSM (900/1800) version, which means you won't find it in the US. Nevertheless, the handset features a 65k CSTN color display, FM radio with sound visualization graphics and dedicated key, Polyphonic and MP3-grade ringtones, **SMS** and picture messaging support. All three low-end phones are expected to be available in the second quarter of this year.
