[Nokia Introduces New 6122c Handset](#)

Exclusively for China Mobile Communications Corporation

Nokia has just announced the launch of the [Nokia](#) 6122c, exclusively available for China Mobile Communications Corporation (CMCC). As an S60 multimedia device, the Nokia 6122c offers CMCC customers rich entertainment features and powerful applications scalable ability. With CMCC keys specifically dedicated to the Internet, customers have faster and easier access to all of CMCC's online services and contents. "Working with top-ranking local operators enables [Nokia](#) to optimize services for local customers, and this product exemplifies our close collaboration with global leading telecom operators," says David Tang, Vice President of sales, Nokia Greater China area. "Its sleek, compact design is iconic of the Nokia brand, now made exclusively for CMCC customers. This demonstrates Nokia's commitment to Chinese customers." Taking pictures is convenient with the 2 megapixel camera equipped with easy-to-use camera keys, flash, and panoramic mode. A large 2.0" display with outstanding brightness and clarity adds more pleasure for Internet browsing and video streaming. Stereo digital music players support a wide range of digital music formats and, combined with FM stereo radio, allow customers to enjoy music anywhere, anytime. The [microSD](#) memory card slot allows the user to expand the memory up to 8GB, which offers plenty of space for favorite images, videos and music. "The Nokia 6122c is another S60 device exclusively available for CMCC, demonstrating the continued collaboration between Nokia and CMCC," says Michael Hsu, Vice President, China Mobile Account, Nokia Operator Channel. "As a world leading mobile phone manufacturer, we highly value collaboration with CMCC. Together we will strive to forge long-term development of the domestic mobile telecom industry." Based on S60 and [Symbian](#) OS, the Nokia 6122c enables the user to download additional applications and content on the phone and enjoy various digital experiences including entertainment services. It also allows the user to run several applications on the device at the same time making it easy to browse the Web while listening to his/her favorite music.
