Nokia N72 Starts Shipping

The handset will be available worldwide

Nokia announced today that it has started shipments of the Nokia N72, the sleek and stylish multimedia computer. The Nokia N72 is equipped with a 2-megapixel camera and integrated digital music player, with dedicated capture key, music player key, an integrated browser, FM radio and support for Visual Radio. "*The Nokia N72 perfectly illustrates our commitment to offer the powerful performance of the Nokia Nseries to people based in regions dominated by **EDGE/GSM** network coverage,*" said Pekka Pohjakallio, vice president, Multimedia Computers, Nokia. Users can personalize their **Nokia** N72 with a choice of digital music tracks, and enjoy music on the go with the integrated digital music player. They can rip music from their CDs, create playlists, and transfer music onto their Nokia N72 with the Nokia Music Manager, part of Nokia PC Suite. Moreover, users can morph their **Nokia** N72 into a digital camera by sliding open the active lens cover and compose their shot using the high definition 2.1 inch colour display. The 2 megapixel (1600 x 1200 pixels) camera includes an integrated flash, which will make it easy to capture images even in low light conditions. Photos and video clips can be personalized with the integrated photo and video editor. Photos can be printed or transferred onto a compatible PC, with the option of online sharing on select **Internet** communities. The **Nokia** N72 is already shipped to key markets worldwide, including the Middle East and Africa, Russia, Eastern Europe, mainland China, India, Indonesia, Singapore, Thailand and Vietnam.
