[Nokia Releasing New Advanced Accessories](#)

Meant to enhance the mobile experience

Nokia Home Music Device
Nokia

It seems that the number of projects Nokia has is endless, since it has now come up with another solution to keep users satisfied, meaning, the creation of new [Nokia Original Accessories](#). These new additions include a broadband modem, a home music device and a new power solution.

All these new appearances come to combine the latest in accessory technologies and innovative solutions in order to keep the users always on their "toes" and to deliver to them all sorts of new devices.

The [home music device](#) includes the usual FM radio, podcasts and Internet radio. All these features are available at a single tap of the button, thus making for a very appealing device mainly due to easy managing features, as well as to the variety of tasks it accomplishes. This new accessory can be connected to a compatible digital music player, to a PC or, of course, to the mobile. On top of all this, it is even compatible with some home stereo systems, thus being one of the most versatile devices available.

In addition, the Nokia Home Music measures only 281x162x130mm, so it's easily movable, while also coming with Ethernet and USB jacks, SPDIF optical output, RCA line-out and 3.5mm auxiliary line-in. Moreover, the FM antenna and the 12V DC power supply probably make this [Nokia](#) device one of the most desirable of all available as of now. Completing the picture are the 3.5mm front headphone connector and the 10W speaker output, which, along with all other buttons and navigational modes on this device, are very easily manageable and deliver a more than satisfactory experience.

The new power solution announced by Nokia, namely the [Extra Power DC-11](#) is very useful for those constantly using their devices, and works by coming to extend the battery life of the mobile. Also, this accessory includes two separate charging connectors, so that two devices can be powered at the same time. Its compatibility expands to micro USB, Nokia 2mm charging interface and Nokia 2mm charger devices.

Finally, the last item is the Nokia [Internet Stick CS-10](#), which is, in a nutshell, a broadband modem providing great Internet connections to your PC or Mac. Using this new accessory, not only will get Internet access whenever you want, but also quite fast for such a device. All that is required is a SIM card with data option enabled for it to reach downloading speeds of up 7.2 MB/s.
