Panda Antivirus + Firewall and Panda Internet Security

2007 brings Titanium and Platinum to the stage

Available since August 17, Panda Antivirus+Firewall 2007 (Titanium) and Panda Internet Security 2007 (Platinum), the two solutions delivered by Panda Software aim to incorporate comprehensive reactive and proactive technologies into a package optimized for performance while tapping but a fraction of the system resources available. "The new Panda Software solution combines antivirus, anti-spyware and anti-phishing technologies with the Genetic Heuristic Engine, a new generation heuristic scanner that detects and blocks unknown threats more effectively than traditional heuristics and with an extremely low rate of false positives," reads a press release from Panda software. Titanium bundles together Panda Firewall with the tiered TruPrevent™ Technologies while Platinum represents a conglomerate of security solutions delivering viral protections, anti-spam and anti-phishing, parental control, Panda Firewall and Identity Protect. Panda Software delivers its products in box format with two and three licenses and one year of service for the following prices: Panda Antivirus 2007 - € 29.95; Panda Antivirus+Firewall 2007 - € 49.95 and Panda Internet Security 2007 for € 79.95. ESD format downloads are available with more various time options service starting at €9.95, €39.95, respectively €24.95.
