## [Protech ONE - Ubuntu for Security Professionals!](#)

*...and Linux programmers.*

Today I am proud to announce the final version of [Protech](#), a Linux distribution created especially for security professionals and programmers. Protech is powered by the lightweight [Fluxbox](#) window manager and is based on [Ubuntu 7.04 \(Feisty Fawn\)](#). As other Ubuntu-based distributions, Protech is a Live CD that you can test just by burning the ISO image onto a blank CD and booting your PC from it. The boot options are the same as those from Ubuntu Linux, the only difference being the nice logo from Protech. The CD starts pretty fast, and without any other introduction you will enter the main desktop, which has an astonishing wallpaper (as you can see in the screenshots below). First thing I've noticed is the Opera link (first position) in the right click desktop menu, very smart choice for a quick access to a powerful Internet browser. It looks like Opera was chosen over Firefox, which is not even installed. Not only that, but Opera comes with Tor (the online anonymity tool) and Privoxy (a web proxy with advanced filtering capabilities for privacy protection). Besides many updated tools, the final version of Protech has added support for many wireless-cards, printing and scanning support, a new Fluxbox version with a complete re-design of look and feel and a new kernel (2.6.20.16). Other changes compared to the beta version are:
 

- Corrected bug Tor not working in Browser
- Corrected bug on installer
- Corrected bug on boot (usplash)
- General minor bugs eliminated

 Synaptic Package Manager added Protech's goal is to give security professionals and programmers the tools they need. Therefore, Protech comes with many network security related applications, such as:
 

- Aquiring Tools:** DCFLDD, DD, DD\_Rescue
- Cisco:** Yersinia, Asleap, Cisco Exploiter
- Database:** Blind SQL Injection, Hackerstorm, HTTP SQL Bruteforce, Metacoretex, SQL Inject
- Enumeration:** DNS; Dig, DNS Enum, DNSWalk, HostGoogle; Finger Google, Google Mail Enum, Google Search, GooScan
- Misc:** pOf
- Samba:** NBTScan, Samba Enum
- SMTP:** Relay Scanner, SMTP Vrfy
- SNMP:** SNMP Enum: SNMPget, SNMPset, SNMPwalk
- WWW:** ISR Forms, List URLs, Paros Proxy
- Exploits:** Exploit Tree, Metasploit Framework 3, Milw0rm
- Forensics:** Analisys; Autospy
- File Carving:** Foremost
- Fuzzers:** Bed, Clfuzz, Pirana
- Honeypot:** Labrea, Honeyd, Tinyhoneypot
- Oracle:** Metacoretex, OAT
- Password Attacks:** Offline; Rainbow Crack, Hash Colision, John, Ophcrack, Samdump2
- Online:** Hydra, Medusa, THC PPTP
- Rootkit:** rkhunter, chkrootkit
- Sandbox:** Splash
- Scanners:** Port Scanners; Amap, Nmap, Onesistyone
- VPN Scanners:** IKE Scan, PSK Crack
- Vulnerability Scanners:** Nikto (Nessus requires manual install)
- Sniffers:** Ettercap, Driftnet, Dsniff, Filesnarf, SSHMITM, Msgsnarf, Mailsnarf, SShow, URLsnarf, Wireshark
- Spoofing:** Ettercap, Yersinia, ARSpooF, DNSSpooF, Etherwake, Fragrouter, Fragroute, lcmpush
- System Hardening:** Bastille
- Tunelling:** Cryptcat, OpenVPN
- Wireless:** Analysis; Kismet / Gkismet
- AP Fakers:** FakeAP, Hotspotter
- Cracking:** Aircrack, Cowpatty, Aircrack-ptw, Aairsnort
- Packet Forge:** Aireplay

 Protech also contains applications for daily tasks:
 

- Web browsers:** Opera, w3m (console browser)
- File manager:** Thunar
- Search software:** Catfish
- Text editors:** Mousepad, Vim, Nano
- Multimedia:** Audacious, Mplayer, Gnomebaker
- Network:** XAMPP, Hamachi, Ndiswrapper (GUI), AutoScan, Hybrid-Share, Wicd (Network Manager), Network Tools, Gftp, Pidgin, telnet, Remote Desktop, Samba (pyNeighbourhood), OpenVNC, VNCviewer
- Programming:** Python2.5, Emacs22 (gtk2), Anjuta
- System tools:** Printer / Scanner

manager, Htop, lftop, Startup Manager (SUM), Ntfs-Config, Gparted, Synaptic, Screenlocker (alock), Fluxbox Menu Editor **Other tools:** ¶; ParolaPass, Calculator, GPSdrive, Xpdf, Xarchiver  
In conclusion, Protech has the looks and the muscles to give you (as a security professional) all the tools you need in order to achieve your goals. Download Protech right now from [Softpedia](#). Have a look at more screenshots of Protech ONE:
