[SLAMPPLite Live CD](#)

A simple solution for your home server

[SLAMPPLite](#) is a Linux Live CD that will turn your personal computer into a simple home server. The difference from his big brother is that SLAMPPLite has smaller size and will fit into a 256 MB CD or USB stick. SLAMPPLite contains only essential server applications like Apache, MySQL, DHCPD, ProFTPD, BIND, SSH and mail server. It also has several programming languages such as PHP, Perl and Python and other tools to support your web development work are also included. To keep it slim and make it easy to update the applications, SLAMPPLite uses server suite provided by XAMPP. [Kemas Yunus Antonius](#) is the man behind SLAMPPLite, and he made this Live CD with a purpose: *"SLAMPPLite is compiled, intended to be your showcase box. So, when you have something to show to your (potential) users or clients, just put your web applications on SLAMPPLite and you will have an instant mobile portfolio. Concerning this state, it makes SLAMPPLite not suitable to be employed on production server, please use the standard SLAMPP instead. Although with some tweaks here and there, SLAMPPLite could also be ready for that purpose. Please remember, SLAMPPLite comes with ABSOLUTELY NO WARRANTY. It is provided as AS IS product. Please use it at your own risk. SLAMPPLite has been tested on several machines, but it will not guarantee that it is going work on any machine. My apology for this inconvenience."*

Let's look at some features of SLAMPPLite:

- Linux kernel: 2.6.16
- Desktop: Xfce 4.2.3.2
- Web, FTP and database servers: XAMPP 1.5.1
- Other servers: BIND, DHCP, Sendmail, Dovecot, SSH
- Programming:- Languages: PHP 4.4.1/5.1.1, Perl 5.8.8, Python 2.4.3- Editor: Bluefish 1.0.5
- Office: Xpdf, Abiword 2.4.1
- Graphics: Xpaint
- Multimedia: Beep Media Player, BashBurn
- Network: Nmap, Putty, BitTorrent 4.4.0 (tracker/client), FTP client, Firestarter firewall
- Internet: Mozilla Firefox 1.5.0.1, Sylpheed 2.2.3, Gaim 1.5.0
- Package management: pkgtool, slapt-get/gslapt
- Antivirus: ClamAV 0.88.1, FetCav (GUI)
- Utilities: GParted, EmelfM2, Dufie, htop, rkhunter, Qemu, backup system and new hard disk installation scripts

Complete list of packages can be found over here, [SLitePackages](#). We have tested SLAMPPLite, it works wonderfully, and here are some screenshots: [Download SLAMPPLite now from Softpedia](#).
