Samsung Announced SGH-Z560 Clamshell

The new model benefits from the HSDPA technology

Samsung Korea unveiled at the 3GSM World Congress in Barcelona a new HSDPA phone, the SGH-Z560. The SGH-Z560 benefits from the high-speed 3.6 Mbps **HSDPA** technology, and will offer transfer speeds of up to 1.8 Mbps, which is almost 6 times better than of the currently **3G** handsets. The SGH-Z560 clamshell has a compact design, with only 16 mm thickness. Samsung Electronics stated that the phone will also include a 2 megapixel camera with autofocus, 30MB of internal memory, and an mp3 player with external controls. In addition, the phone features a 2.3 inches **QVGA** main display, with a 240 x 320 pixel resolution and 262k colours, which can enable a viewing experience similar to that of the recently launched handset SGH-P900. **Samsung** hasn't revealed too much information about the price or it's availability. Samsung is also showing some other new phones like, Samsung SCH-B3200 DMB phone, **Samsung** SCH-B380 phone, Samsung SGH-P910 MediaFLO DMBphone and Samsung SPH-B4100 TV Phone. According to the **Samsung** Korea, "Samsung Electronics possesses the most up-to-date communication techniques and the most up-to-date hand phones in the whole world communication."
