[Silent Hunter Cheat Pack \(PC\)](#)

Entire cheat list for all the Silent Hunter games

Silent Hunter is a [World War II](#) submarine combat simulation for MS-DOS, developed by Aeon Electronic Entertainment and published by Strategic Simulations in 1996. The game takes place in the Pacific War during [World War II](#), the player commanding a submarine of United States Navy. Most contemporary US submarines and Japanese warships are featured along with some generic merchants. Silent Hunter has received high appraisal from subsim aficionados and is considered to be the best Pacific War subsim. SVGA mode is used, but the graphics are in 2D, which was old-fashioned by the time of the release. However, the game (rather exceptionally) models spherical Earth by having visibility be limited by the horizon. ([Wikipedia](#))
