Sony Ericsson G705 SE4m

[Sony Ericsson G705 Slider Leaked](#)

New G-series handset with an elegant appearance

Although it has canceled the G702 (codenamed BeiBei), Sony Ericsson did not give up on producing new handsets from the G-series. The proof is a brand new Sony Ericsson G705, recently appeared on the Web in lots of unofficial but good-looking pictures.

Unlike the other three G-series phones currently available on the market (G502, G700 and G900), which are all candybars, the G705 is a slider. Its overall design resembles the one of the [W910](#) Walkman phone, but it brings more elegance and a nicer alphanumeric keypad.

There aren't too many details about the features of Sony Ericsson G705, but from the available images we can see that the handset will bring a 3.2 Megapixel camera with LED flash, fixed focus and video recording, as well as a front-facing camera for video calls.

The display of G705 seems to be a 2.4 inch one that (most probably) has 240 x 320 pixels and 262K colors. The new handset runs on an A2 platform (hence it is not a UIQ smartphone) and it's said to come with built-in GPS and Wi-Fi. If 3G and quad-band GSM connectivity are also included, then Sony Ericsson might have a new mid-end hit device in the G705.

Details about the official announcement of Sony Ericsson G705 are currently missing, as the source of the leaked images (the [SE4m forum](#)) doesn't mention anything about this. However, according to the [Unofficial Sony Ericsson Blog](#), the G705 could be fully unveiled in mid-August, together with another new SE handset, namely the so-called [Remi](#) candybar.

All in all, it's surely good to see Sony Ericsson trying to come up with yet another set of new phones (after last week's presentation of [W902](#), W595 and W302), so let's wait and see what August will bring exactly in terms of Swedish-Japanese handsets.
