Sony Ericsson W62S
Sony Ericsson & KDDI

[Sony Ericsson W62S Released in Japan](#)

Via KDDI au

Sony Ericsson recently launched a new handset for the Japanese market, the W62S, via [KDDI au](#), Japan's second largest mobile operator. First announced at the beginning of 2008, [Sony Ericsson W62S](#) is a clamshell phone that was, most probably, created especially for the needs of Japan's mobile users. The new device is made out of lightweight but durable aluminum and has a simple, elegant design, resembling most of the clamshells released in Japan. A worth-mentioning aspect is the phone's keypad, which comes with a very nice lighting feature (see the images at the end of the article). Sony Ericsson W62S packs a wide 2.7 inch internal display with 240 x 432 pixels and support for 6.5 million colors, an external 1.1 OLED screen for quickly viewing details like incoming or missed calls, GSM and CDMA / EV-DO connectivity, GPS (maps included), a 2.0 Megapixel camera with auto focus, digital zoom and video recording (in QVGA mode), high-end speakers with 3D stereo surround, email and Internet capabilities, pre-installed games, document viewer, 60MB of internal memory and microSD card slot for up to 2GB. The new Sony Ericsson handset [weighs](#) 119 grams, measures 101 x 48 x 16.9 millimeters (when closed) and includes an 870 mAh battery capable of providing up to 240 minutes in talk-time mode and up to 350 hours in stand-by. KDDI au offers the W62S clamshell in three color versions: silver / black, black / red and white / green. The phone's price is not listed for the moment, but it's surely not an affordable one. Sony Ericsson will probably not release the new handset in other countries except [Japan](#), so those who like the W62S and don't live there have little chances to ever get their hands on it. Anyway, we can still enjoy the available images with the device:
