[Sony Ericsson Z520i](#)

A phone with style

The designers are having an increasing influence in the world of cellular telephony and Sony Ericsson's Z520i comes to confirm that. Aside from a stylish design, Z520i also incorporates the latest technological breakthroughs. The quad-band type band is Bluetooth compatible, has a VGA resolution digital camera, 4X digital zoom, 1.8 inch 65,000 colors and 128 x 165 pixel LCD, but also a secondary 1 inch display with 4,096 colors and STN technology. The main advantage regarding customization is the collection of Style-Up cases which transform the phone in a perfectly matched accessory. Z520i allows playing MP3/AAC audio files, MPEG4 video files, 3GPP and 3D games, which are stored on the 16MB internal memory which unfortunately cannot be increased through a memory card. The phone is Bluetooth, USB, infrared connectable and supports PC synchronization. The commercial availability of this model was announced for the third quarter of this year.
