[Sony Ericsson Z770 Turned Orange](#)

No details yet about the availability of the new color version

Phone Blog

Sony Ericsson Z770 was recently spotted in a new color version that combines orange with a yellow pattern and a silver keypad. This looks pretty nice (especially for female users) and it is a nice addition to the already existing three color versions: Graphite Black, Exquisite Golden and Vogue Red. Released on the market in March, the Z770 is a clamshell created to bring users easy access to the Web while on the go. Back in February, when the Z770 was first unveiled, Martin Winkler, Global Marketing Director and Head of Multimedia Web at Sony Ericsson, said about the phone that "it is deceptively powerful for such a compact clamshell phone" and that "it appeals to busy people who demand hassle-free email and high quality Web access on the move". Well, these attributes seem to best describe the handset. The full list of specs packed by Sony Ericsson into the Z770 includes: tri-band GSM connectivity plus HSDPA for high data transfer speeds (up to 3.6 Mbps), a 2.2 inch TFT internal display with 240 x 320 pixels and 256K colors, Magnetic Mouse Pointer, NetFront 3.4 browser with zooming and panning features, email, Instant Messaging, RSS feed reader, Music and Video players, FM radio with RDS, Bluetooth 2.0 with A2DP, a 2.0 Megapixel camera with video, USB 2.0 and 32MB of internal memory expandable with a Memory Stick Micro card. The Z770 weighs 91 grams and, when closed, it measures 93 x 48 x 15.5 mm. Its 930 mAh battery is capable of offering 8.5 hours of talk-time on GSM networks and 4.5 talk-time hours on the 3G ones, while the stand-by time can go up to 350 hours. For the moment, we have no details about where the orange Z770 can be bought from. On the official website of Sony Ericsson, the new color is not featured yet, but we assume it will appear pretty soon, as it's a *very summer-ish* color.
