## [Spb Online the Ultimate Online Services for Mobiles](#)

*All-in-one solution including news, games, weather and many more*

One of the best Online service solutions, [Spb Online](#), developed by the well-known Spb Software company, is an all-in-one tool that provides users with easy access to news, programs, games, weather, themes and ringtones. Also, the application offers users a mobile TV solution, as well as an integrated online radio. With a stylish interface, specific to Spb Software products, [Spb Online](#) seems to be the ultimate single entry portal for online services and payments.

The software features of the application include: Online TV, Online Radio, News, Weather, On-Device Catalog, Online Games and Auto Update. The first feature, Online TV, provides users with live TV station broadcasting especially designed to work on any compatible mobile device. One of the most appealing traits is the picture-in-picture function. Users will also be able to check the battery level right on the homescreen. In case of a low-speed Internet connection, the application will simply decrease the quality of the image, but it will keep the audio quality. Users will also be able to make Outlook reminders of their favorite programs from the TV guide that has been integrated into the application.

The Online Radio component enables users to listen to radio stations from all over the world in real-time streaming. The app contains a comprehensive catalog of radio stations that they can choose from, which is fully organized and sorted by popularity, in case they don't have any favorites yet. The News part of the application is basically a news reading program that enables users to read news even when they're offline. The interface and the features are much the same as an RSS News Feeder as it fully supports RSS/Atom standards.

The Weather component contains fully reliable forecast from over 10,000 cities. The information is detailed for night, day, morning and evening. The Online Games feature enables users to play Checkers, Hexagon and Reversi with any player that is available online. The complete online service solution can be acquired for 29.95USD, but a fully functional 30-day [trial](#) is also available for download.
