## [Super-convergence: 9 Devices Crammed into One](#)

### *Hanaro Plus from KJ Global*

Convergence has become, over the past few years, a very important concept for all the manufacturers of electronic devices, but what you're about to see really takes this concept towards the next level, because the Hanaro Plus from KJ Global includes no less than 9 different devices, all crammed into one. Thus, Hanaro Plus is a: webcam, digital camera, camcorder, wireless microphone, USB hub, card reader, DVR and visualizer. Moreover, the manufacturers of Hanaro Plus are offering a very powerful software package, which allows the users to exploit the device's capabilities to the max. The package contains a security program (with zoom function), but also some programs for photography, recording and editing functionality, as well as applications for conferencing, video conferencing, remote lectures and security. Here are the most important technical specifications of Hanaro Plus (namely, of its most important components): - **General dimensions:** 180 x 180 x 310 mm; - **Digital camera:**- 1.3 Mpixels, CMOS sensor;- Dimensions: 89.5 x 71.2 x 35 mm; - Weight: 135 grams; - Recording resolution: maximum 30 fps; - Interface: USB 2.0; **Speaker:** 3 W, stereo; **USB Hub:**- 3 ports; - Interface: USB 2.0;- Transfer rate: maximum 480 Mbps;- **Card reader:**- CF, SD compatibility; - Interface: USB 2.0. Hanaro Plus really is quite an interesting gadget, but it contains way too many other devices crammed in a relatively tiny space, which could really represent a disadvantage (a decrease in the quality of each function). We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
