[TameStorm Announces Virus!](#)

Calm down, it's just the name of a new-in-the-field RTS

The game comes to life as you enter the research laboratory of the National Defense Ministry. You start the game with a small colony of viruses that develop throughout the game. You breed viruses and take care of them. When in need, you commit them to battle. Your viruses make coordinated attacks on the enemy's software. They are your soldiers who are always ready to help you in your fight against numerous computers - servants of your enemy. The malicious computers are protected by antivirus programs, anti spam filters and firewalls. Controlling hundreds of viruses at a time is hard, that is why special creatures called Attractors always make sure that your faithful viruses are at your service. Challenge comes with every new level as computers become much slier and fiercer. Who will snatch the victory: human beings or their brainchild? You will be engrossed in that question throughout the whole game. The game has a very large list of features; I will mention only a few of them: Totally-addictive game play with an original game scenario; 28 levels to go, 9 cool bonuses and deathmatch games in the registered version; Lively music plus high-resolution graphics, smooth animation, rich colors; A unique mixture of arcade and RTS. The demo version is available for evaluation and can be downloaded [here](#). It's highly unlikely that among your favorite applications, there isn't an IM client. There's a broad offer, and even Google has entered the market. This week, Softpedia News [is inviting you to choose your favorite IM client.](#)
