[The Computer with Beer Tap](#)

The convergence of technologies

The prayers have been answered, and the gods have had mercy on the mortal souls. Ladies and gentlemen, today we offer you the proof for the convergence of technologies, a subject which has been long discussed by analysts and IT experts: the computer with beer tap. What could be more relaxing than watching a movie and pouring a glass of beer straight from the case? Unfortunately, there aren't too many details about it, but although you might think that under no circumstances would the case be able to house the components of a computer, the Italian site gadget.blog.it says that this is possible. From an engineer's point of view, two of the problems arising from such a design are the temperature and humidity inside the case, because nobody likes a warm beer, and the having water on your components is not recommended. Anyway, the idea is brilliant and for those who enjoy alcohol and use computers, this is a dream come true. We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
