[Tron 2.0 Cheats \(PC\)](#)

Codes for both the full version and the demo one

Tron 2.0 is a computer game developed by Monolith Productions. It is a sequel to the 1982 movie-based game. The PC version of the game was released by Buena Vista Games on August 26, 2003. The Mac version was released by MacPlay on April 21, 2004. The game is a **first person shooter** set "inside" a computer in the same sense as the original movie. It cheerfully uses and abuses computing conventions; players will find themselves in the flaming red environment of a firewall and the minimalistic white one of a PDA, battle viruses while fleeing a format, and wield a sniper rifle known as LOL. A light cycle mini-game is included as part of the plot as well as available in multiplayer mode across a network. The idea of Tron 2.0 was originally explored as a movie concept, but it was eventually decided to focus first on making it a game. The Tron sequel film has recently been announced, and production is expected to begin soon. ([Wikipedia](#))

CHEATS Press T during game play to display the chat window. Enter one of the following codes, then press Enter to activate the corresponding cheat function.

Codes All weapons sub-routines, full health, full energy - mpkfa Unlimited ammunition and all weapon sub-routines - mptears Full health - mphealth God mode - mpgod Level skip - mpmaphole Skip entire mission - mpnextmission Third person view; Jet floats above ground, no animations for his body - mpasscam Display map coordinates - mppos Display build version - mpbuild Spawn briefcase from No One Lives Forever - mprosebud
