Ttool: Wonder PMP-GPS-DMB Combo

MP3 player, video player and GPS unit

If you're a sucker for PDA-PMP-DMB- GPS combos, then you should move to South Korea. This all-in-one wonder is a PMP (Portable Media Player) running on Windows CE, with a Samsung SRC2440A (400MHz) processor. It's a MP3 player, a video player and a GPS unit in the same body. As you've probably guessed, it's not going to land near the U.S or Europe "territories". The Ttool features a 7" TFT LCD touchscreen with a resolution of 480 X 234 pixels and can be used for navigation thanks to the SiRF III chip and antenna (the de facto standard for a GPS receiver) as well as some specific navigation software. The software can help you find a location using the search by address or the search by point on interests. It also comes with SD/MMC memory cards to make it look less bulky. Ttool has a very user-friendly interface that lets you fast-switch from one mode to another (if you know Korean that is). Moreover, you can always watch movies and TMDB transmissions on the go thanks to the DMB (Digital Multimedia Broadcasting) feature, view photos or listen to AM/FM radio. It also does some retro-games just in case you're not a movie addict. Other features include two built-in stereo speakers so you can use it anywhere, anytime. Here are some specs:-Samsung CPU: SRC2440A (400MHz) -Memory: 64MB ROM, 64 MB SDRAM -Samsung Display: 7" TFT-LCD -GPS: SiRF Star III-Audio: 38mm x 2 stereo speakers, earphone, microphone-FMT: GTG-602-DMB: TDMB (BAND III)-Expansion slot: SD/MMC -Battery: 2640 mAh Li-Polymer-OS: Windows CE.Net 5.0We are just a few, but there are many of you, Softpedia users, out there. That's why we thought it would be a good idea to create an email address for you to help us a little in finding gadgets we missed. Interesting links are bound to be posted with recognition going mainly to those who submit. The address is .
