[Ubuntu Weekly Report: 4th - 10th May, 2008](#)

Encrypted Ubuntu, Ubuntu Brainstorm news and a lot of updates!

This week we've released a guide for those of you who want a secure and encrypted Ubuntu operating system. Data encryption is one of the best methods to protect your sensitive files, especially if you own a laptop. Unfortunately, on the Ubuntu OS, this is only available in the text mode installer. But that's why this guide is here, to help you [install a fully encrypted Ubuntu OS](#) on your computer. In other news, we would like to inform you that the **Ubuntu Brainstorm** project continues to grow and was updated this week with the possibility to bookmark ideas, developer comments are now visible, better user information and statistics, and two new browsing methods for all ideas: by most popular and by latest ideas. Now, let's move on to the security updates and fixes for all the Ubuntu releases. First, the common security updates: CUPS vulnerability; macs vulnerabilities; KDE vulnerability; Thunderbird vulnerabilities; OpenOffice.org vulnerabilities; LTSP vulnerability; Speex vulnerability; vorbis-tools vulnerability; GStreamer Good Plugins vulnerability.
