Vertu Ascent Ti

## **Vertu Ascent Ti Receives FCC's Approval**

*Prepare your wallets! Another luxury phone is on its way*

Vertu will bring another expensive luxury mobile phone out on the market for those who appreciate this kind of devices. Vertu Ascent Ti has just been FCC approved, which means that it should be available for an expensive purchase in no time now. [Vertu Ascent Ti](#) is one of the most expensive models of phones and manages to pack some statement elements to let people know just how special it is. The handset comes with leather and steel keys with jeweled bearings. That may not be the diamonds that Vertu has gotten us used to until now, but still manages to show some high class for what it's worth. This new phone is one of the first which also adds some high technology performances to the refined handcraft that Vertu has brought with previous phone models. Until now, most of this type of releases managed to bring especially expensive materials and technology for providing high class devices. Vertu Ascent Ti will be available in colors of black, brown, solid red, orange and azure. Another special feature about this cell phone is that it will come with sapphire crystal screen to match the steel keys. Connectivity will be available through Bluetooth and modem support. One impressive aspect is that it will also come with 3G capabilities, which adds some value on the technical part too, for this phone. Another appealing thing is that Vertu Ascent Ti will also have a 3 megapixel camera which stands above the average performances coming from most cellulators. Price is what makes this range of mobile phones so appreciated. The Vertu Ascent Ti model should be available quite soon, although the exact time for that has not been revealed yet. The price is still unknown, although we should expect a 4 digit sum, as the value of this phone is measured in how much people are willing to pay for extreme luxury.
