[Warhammer: Mark of Chaos Cheats](#)

Lead on My Lord!

It's the End Times and war feels right at home in the world of [Warhammer](#). Magic and superstition blot out all hope of a better future. Nothing left to do but engage in the bloodiest war this realm has seen. Conquerors, sorcerers and heroes stand up to battle this dark age that has embraced everything. Strategy is the key word for Mark of Chaos. And you, the brightest leader there is, are bound to be on one side or the other. Four races try to get on your good graces and convince you to show them the way to glory. Will you choose to stand by the side of the Empire - humanity's last hope with their basic understanding of magic but vigorous warriors? Will you side with the magical High Elves and put that chaos derived energy to good use? Do you choose the underworld rat-men to be your instrument of evil or do you go even further away and lead the armies of Chaos? No matter what your choice is, you could surely use a little help while facing your computer opponents. May I remind you that cheating in multiplayer is highly unrecommended? All of the above being said, feel free to press ENTER during the game to drop the console and just type in the following codes to make your path to glory seem a little bit easier: Love the Gelt # i¿½ sets gold to the numeric value of #Strong Wind i¿½ the selected units regenerate magic points Irresistible Force i¿½ spell casting delay for selected units toggled Army Creep i¿½ selected units are invulnerable for current map Be sure to have the last [patches](#) installed and enjoy the ride!
