[WiFi Phone NT 700 from NexTouch](#)

Presented at VoIP/IPTV WORLD 2006

NexTouch is currently showing off their new WiFi mobile phone, NT 700. The NexTouch NT 700 works through wireless access protocol IEEE 802.11b/g and it will probably be very popular on the Asian market where the [WiFi](#) Phone segment has grown significantly over the last period of time. NexTouch's newest WiFi mobile phone, the NT 700 is equipped with a 1.52 inch 65000 color [TFT](#) display with a resolution of 128 x 128 pixels and measures 102 x 44 x 15.2 mm. As for usability, it has a continuous call time of up to 3 hours and a standby time of approximately 60 hours. The phone works only through WiFi which means that there will be no mobile phone bills for the user of this phone, but also that this phone will only be usable in areas that offer a good number of WiFi access points. There is no information regarding availability or price at this moment, but hopefully, there will be more info on the NT 700 soon.
