## [Woo W62H from Hitachi Announced](#)

*To be released in Japan*

Hitachi Wooo W62H  
Hitachi

Hitachi, one of the largest Japanese companies in terms of employee number (more than 380,000), recently released a new mobile phone, the Wooo W62H. The new Wooo handset comes after the [W61H](#) model, which has, besides a normal display, an e-ink one that allows users to personalize its look with 95 pre-set graphic patterns. Anyway, we're talking about the new Hitachi9i phone here. As the W61H, Wooo W62H has a clamshell form factor and it can be opened in two ways: a classical one, in which all clamshells can be opened, and a vertical one, for its mobile TV mode. The features of Hitachi Wooo W62H include a 2.8 inch internal display with a 240 x 400 pixel resolution, external illuminated LEDs, 1Seg mobile TV capability, TV out, Bluetooth, Music player, Video player, email, Web browser, document viewer (supporting Word, Excel, PowerPoint and PDF files), multi-tasking capabilities, 3D games (that will probably offer users lots of fun and interactive moments), a set of English-Japanese dictionaries, USB, 800MB of internal memory that can be extended with up to another 8GB. Moreover, there's also a 2 Megapixel camera with flash, zoom and video recording, but this is not really a thing to be proud of, considering the fact that lots of new Japanese phones include 5 Megapixel cameras. Weighing 122 grams and measuring 106 x 51 x 18.2 millimeters (when closed), the W62H has a battery capable of providing up to 4.3 hours of talk-time and up to 230 hours of stand-by time. Hitachi Wooo W62H will be soon available in Japan in three color versions, blue, black and silver, sold by au KDDI, the carrier that also offers the new [Toshiba Sportio](#). As most of the phones released on the Japanese market, Hitachi Wooo W62H will probably never be available in another country.
