Worms 3D Unlockables (GameCube)

It's a wormocide out there!

One of the best games ever made for replay value. Another great game that couldn't survive without multiplayer either. It's hilarious chucking a grenade at your friend and blowing him into a pool or just poking him so he just falls off a few centimeters of the edge. Another great feature that is back in [Worms 3D](#) is the random landscape generator, you set the percent on how much water you want, how high the level is etc. It will then give you a selection of numbers to which you can input again if you liked the level. You could also type in words and see what type of level comes up - which sadly enough is quite fun
