Intrinsic Development

## [iPhone SDK Training Launched in the UK](#)

*Possible thanks to Apple's lifting the non-disclosure agreement, in October 2008*

Intrinsic Development Corp. is launching a new iPhone Developer Training Course in the UK. With Apple having eliminated the non-disclosure agreement surrounding its iPhone SDK last month, "the dialogue is now flowing," giving Intrinsic the opportunity to expand developers' opportunities in creating cool apps for [Apple's](#) handsets. "We're pleased to bring a new [iPhone](#) Developer Training Course to the UK, offering developers in UK and Europe endless opportunities in this exciting, dynamic market," says the company.

"With the ever increasing market share of the iPhone, globally and in the UK, this is an inspiring time for mobile platform developers and programmers. There are new opportunities for discussion, interaction, and learning about the platform, frameworks, tools and languages that are used to create applications for this amazing new platform," Intrinsic reveals.

The course, developed by About Objects, Inc., will be presented throughout December 2008, in Reading, Berkshire, UK. The three-day course will focus on providing delegates with the basics of programming for the iPhone, enabling them to become proficient users of the iPhone Software Development Kit, and part of a new community of developers.

Participants will get to know the essentials of Objective-C and Cocoa Touch, learn the tools, the libraries, the concepts, and the best ways to get an app to work properly. Xcode, Interface Builder, and the UIKit framework will also be brought up, when delegates move on to developing apps that take full advantage of the capabilities of the iPhone.

Interested parties need to note that Intrinsic's iPhone Developer Training Course is aimed only at those with a bit of experience in C programming (or those who've recently taken ANSI C Programming or the equivalent), or at those at least interested in learning Objective-C and the iPhone SDK to develop code for the platform. The released version of the SDK that is not subject to NDA restrictions installed on one's own laptop is also required. Topics that are covered by any NDA cannot and will not be discussed during this course.

To learn about the program, the Instructors, and the tasks participants will carry out, see Intrinsic Development's page on the iPhone Developer Training Course [here](#). The first course starts on December 10th, 2008.
