iPod 'Jambox' with 7-Inch LCD Display, Surround Sound

Goodmans iPod Dock with 7" LCD Display

Goodmans has announced something that looks like a ghetto blaster, but comes with an additional feature that b-boys didn't benefit from back in the day - a seven-inch widescreen LCD display situated between the two speakers. The gadget enables you to show your photos and play videos on the screen using the included remote control. Read on for details on the features, pricing and iPod compatibility. The Goodmans iPod Dock with 7" LCD Display also supports multi-languages and even includes earphones, for around US\$175. It's compatible with the following devices: iPod touch, iPod classic, 3G iPod nano, 2G nano and 5G iPod (with video). "The Goodmans iPod Dock with 7" LCD Display is a brilliant gadget which is perfect for people on the go who like using all of their iPod's functions!" iWorld says. The LCD display offers a "brilliantly clear image," whether it's music videos, photos or movies that you are watching, as well as quality sound through its built-in stereo speakers to the left and right sides of the LCD screen. You can use the Goodmans iPod Dock with 7" LCD Display to play music or videos while charging your device at the same time. The company doesn't guarantee that this product is video compatible with the new generation iPods. Main features of the Goodmans iPod Dock with 7" LCD Display include: LED backlight; superior surround sound; support for video, music playback and photo viewing; full iPod docking functionality with iPod charging; support for other MP3 music players; 3-In-1 card reader (SD/MMC/MS); USB host; multi-language support; full-function remote control; playable files from iPod series. Check with [this address](#) for compatibility with your device. Due later this summer, the Goodmans iPod Dock with 7" LCD Display will ship with a 3-In-1 memory card reader.
